RE: Energy Management Systems

We recommend the use of energy management systems like the external VendingMiser and VM2IQ on our older vending equipment to save energy whenever it can be justified financially to meet our customer's needs. Many older vending machines equipped with either the external Vending Miser or internal VM2IQ use less energy and are comparable in daily energy performance to new Energy Star qualified machines.

The external VendingMiser uses a Passive Infrared Sensor to power down the vending machine when the machine is not in use. It also monitors the room temperature and re-powers the machine to maintain product temperature and quality. The external VendingMiser can result in energy savings of up to 46% in older vending machines. The external VendingMiser is generally purchased by customers such as Colleges, High Schools and Government Buildings. As a rule, we will allow the external VendingMiser to be placed on our vending machines to help save energy.

The internal VM2IQ monitors sales and powers down the vending machine's cooling system when the machine is not in use. It also monitors room temperature and re-powers the machine to maintain product temperature and quality. The internal VM2IQ can result in energy savings of up to 35% in older vending machines.

We do not recommend using either the external VendingMiser or internal VM2IQ on new Energy Star rated vending equipment.

We do not recommend using the external VendingMiser on vending machines equipped with e-Port credit / debit payment systems. However, the internal VM2IQ is compatible for use with e-Port credit / debit payment systems.

Our Bottlers/Distributors are not obligated to install or maintain either the external VendingMiser or internal VM2IQ should a customer request it. The decision to install or maintain either piece of equipment is a financial decision made by the individual Bottler/Distributor and their customer.
